AUG 2023

Ongoing Research

Evasion Along Borders: How Trade Variables Affect the Size of the Shadow Economy
A thesis for AUA's Capstone: Honors Thesis course that examines the effects of trade on the size of countries shadow economies. The paper utilizes panel data, instrumental variables, and the ARDL Dynamic Panel Model. The data analysis thus far is available on my GitHub

Personal Projects

- The Walks for Dogs Foundation

Created a non-profit organization to allow students to improve their community while getting sought after community service hours
- Image Text Recognition

Created a text recognizer and image scanning app with full features and iOS App Store download.

- Gradar - Grade Calculator

Currently an on-going project. Creating a website that allows students to better calculate and keep track of their grades.
- Automatic Resume Creator

A personal project that allows one to define which accolades and experiences I would like to include in the resumé. Note: this resumé was generated by said program.
